# User Guide: Excel Compiler

By: NauffalFirdaus@NC4 2025

The Spreadsheet Compiler Application allows you to:

- Merge multiple Excel files (.xlsx, .xls) or CSV files into a single file.
- Automatically format the data in a tabular structure.
- Create a pivot table summarizing the number of entries from each source file.
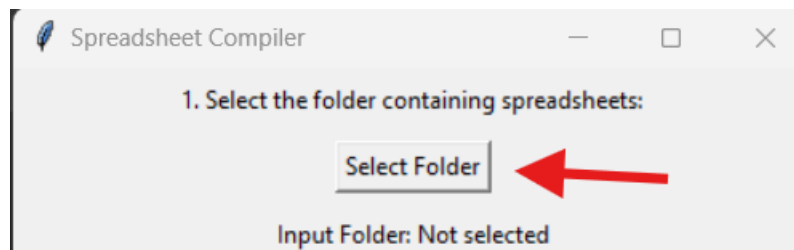

How to Install:

1. Go to:
   https://github.com/NauffalFirdaus/ExcelCompiler/blame/main/compileExcel.exe
2. Click the circled button

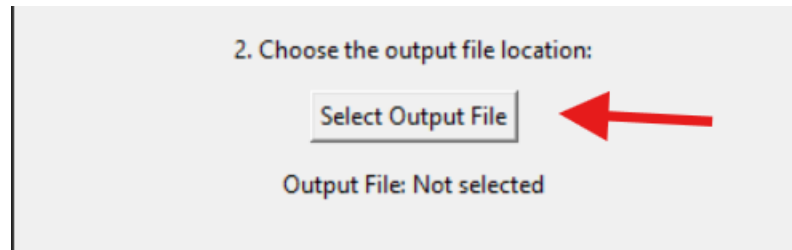

Step-by-Step Instructions

Step 1:

1. Create a folder with all the spreadsheets that want to be compiled.
2. Launch the application.
3. Click the "Select Folder" button.
4. Choose the folder containing the spreadsheets you want to compile.
5. Verify the folder path under "Input Folder".

Step 2:

1. Select Output File
2. Click the "Select Output File" button.
3. Choose a save location and name for the compiled Excel file (e.g., compiled_data.xlsx).

Step 3:

1. Run Compilation
2. Click the "Run Compilation" button.
3. Find the compiled file in the selected destination folder
